Bing: Sol 7 1 Scientific Notation

Don't return the result of float(s) or None on fail. if you then use it as `x = float('0.00')`; if `x`: `use_float(x)`; you've now got a bug in your code. Truthy values are the reason these functions raise an exception rather than returning None in the first place. A better solution is just to avoid the utility function and surround the call to float in a try catch when you want to use it

Amazon.com : Texas Instruments TI-30XIIS Scientific

Robust, professional grade scientific calculator. Logs and antilogs It has 2-line display shows entry and calculated result at same time Easily handles 1 and 2 variable statistical calculations and three angle modes (degrees, radians, and grads) and scientific and engineering Falsetation modes It has 1-year limited warranty

Mathematics Instructional Plans (MIPs)
