Dynamics of Population Change

The Dynamics of Socio-Economic Development

Why are poor countries poor and rich countries rich? How are wealth and poverty related to changes in nutrition, health, life expectancy, education, population growth and politics? This modern, non-technical 2005 introduction to development studies explores the dynamics of socio-economic development and stagnation in developing countries. Taking a quantitative and comparative approach to contemporary debates within their broader context, Szirmai examines historical, institutional, demographic, sociological, political and cultural factors. Key chapters focus on economic growth, technological change, industrialisation, agricultural development, and consider social dimensions such as population growth, health and education. Each chapter contains comparative statistics on trends from a sample of twenty-nine developing countries. This rich statistical database allows students to strengthen their understanding of comparative development experiences. Assuming no prior knowledge of economics the book is suited for use in inter-disciplinary development studies programmes as well as economics courses, and will also interest practitioners pursuing careers in developing countries.

Pakistan Development Review

This title was first published in 2003. Nurul Islam, currently head of economic and social policy at the FAO/UN and a key advisor at the International Food Policy Research Institute, has been a renowned expert on economic development for the past thirty years. Over that time he has researched and written about a wide range of economic development issues, focussing mainly on policy. For the first time ever, his most important writings have been brought together in this volume, reflecting not only Professor Islam's own views on particular issues, but also providing a unique overview of the key debates and discussions taking place among academic economist and policy analysts over the past three decades. The collection is divided into three main sections: trade and aid, development strategy, and food security, the section on food security being the most recent. It discusses food security in a broad sense, covering issues of availability and growth in food production, access or entitlement of individuals or households to basic food, and variability in food supplies and prices. In the section on Development Strategy, Professor Islam highlights how theoretical argument has veered away from organized 'development planning' models which proved so important in the 1960s. He questions the role of models and policies throughout the decades and, following articles written in the 1970s or 80s, he includes articles he has recently completed, assessing the previous ones from his current perspective. In the final section, on Trade and Aid, he follows the academic debate on trade and exchange rate policies in developing countries from the 1960s to the progress of the WTO forums of today. This is a wide-ranging and thought-provoking volume. No matter whether the subject in question was examined in the 1960s or currently, Professor Islam provides a challenging and insightful analysis, and even the earliest articles retain relevance and will be of continuing interest.

Numerical Analysis & Statistics

This book describes a broad research program on quantum communication. Here, a cryptographic key is exchanged by two parties using quantum states of light and the security of the system arises from the fundamental properties of quantum mechanics. The author developed new communication protocols using high-dimensional quantum states so that more than one classical bit is transferred by each photon. This approach helps circumvent some of the non-ideal properties of the experimental system, enabling record key rates on metropolitan distance scales. Another important aspect of the work is the encoding of the key on high-dimensional phase-randomized weak coherent states, combined with so-called decoy states to thwart a class of possible attacks on the system. The experiments are backed up by a rigorous security analysis of the system, which accounts for all known device non-idealities. The author goes on to demonstrate a scalable approach for increasing the dimension of the quantum states, and considers attacks on the system that use optimal quantum cloning techniques. This thesis captures the current state-of-the-art of the field of quantum communication in laboratory systems, and demonstrates that phase-randomized weak coherent states have application beyond quantum communication.

Proceedings of the Eighth National Statistical Conference on Statistics in Development Planning

Compiles and interprets data on the extent of child labour in selected sectors and the effects on education, health and moral and spiritual development. Gives the socio-economic background of child workers, the hours worked and earnings, health care and safety measures, perceptions of their parents, etc. Includes the questionnaire used in the survey.

Bulletin

This book explores the various aspects of Waqf management in ISDB member countries/jurisdictions as well as in non-Muslim majority countries. Topics covered include Waqf regulation, its modernization and relationship to Maqasid Al-Shari'ah; performance of Waqf activities; time and activity-wise distribution of Waqf resource management; the

antecedents and consequences of Waqf assets (both physical and cash); the strategies and models to promote Waqf-related activities for greater socio-economic development; good governance practices through the formulation of informed policies for Waqf projects; the confluence of Waqf, zakah, charity, and Islamic microfinance impacting socio-economic development and so on. Comprising different issues and perspectives adopted by various authors/researchers, the book is specifically designed to meet the needs of academics and industry practitioners in the field of Islamic finance to provide general and Shari'ah guidelines on the emerging issues within the subject.
