Impact and Explosion: Structural Analysis and Design presents a comprehensive study of the structural dynamics of impact and explosion by providing a survey of types of aircraft, missiles, bombs, and detonators. Impact dynamics, including empirical models developed for different materials, water surfaces, and soil/rock mediums, is discussed. Other topics include load time history; explosion dynamics related to material damage capabilities; dynamic finite elements with provisions for impact and explosions; a discussion of solution procedures, acceleration, and convergence criteria; methods for designing structures resistant to impact and explosions; and how damage results due to impact or explosions. Case histories, comparative studies, numerous examples, appendices, and extensive references reinforce information presented in this important book for engineers and researchers working in government and private industry laboratories concerned with blast or impact loading effects on structures. Small firms that deal with impact loading

(e.g., automobile collisions) will also find this book valuable.
