Sets the standard for introducing the field of comparative politics This text begins by laying out a proven analytical framework that is accessible for students new to the field. The framework is then consistently implemented in twelve authoritative country cases, not only to introduce students to what politics and governments are like around the world but to also understand the importance of their similarities and differences. Written by leading comparativists and area study specialists, Comparative Politics Today helps to sort through the world's complexity and to recognize patterns that lead to genuine political insight. MyPoliSciLab is an integral part of the Powell/Dalton/Strom program. Explorer is a hands-on way to develop quantitative literacy and to move students beyond punditry and opinion. Video Series features Pearson authors and top scholars discussing the big ideas in each chapter and applying them to enduring political issues. Simulations are a game-like opportunity to play the role of a political actor and apply course concepts to make realistic political decisions. A “marvelous history”\* of medieval Europe, from the bubonic plague and the Papal Schism to the Hundred Years’ War, by the Pulitzer Prize-winning author of *The Guns of August* \*Lawrence Wright, author of *The End of October*, in *The Wall Street Journal* The fourteenth century reflects two contradictory images: on the one hand, a glittering age of crusades, cathedrals, and chivalry; on the other, a world plunged into chaos and spiritual agony. In this revelatory work, Barbara W. Tuchman examines not only the great rhythms of history but the grain and texture of domestic life: what childhood was like; what marriage meant; how money, taxes, and war dominated the lives of serf, noble, and clergy alike. Granting her subjects

their loyalties, treacheries, and guilty passions, Tuchman re-creates the lives of proud cardinals, university scholars, grocers and clerks, saints and mystics, lawyers and mercenaries, and, dominating all, the knight—in all his valor and “furious follies,” a “terrible worm in an iron cocoon.” Praise for *A Distant Mirror* “Beautifully written, careful and thorough in its scholarship . . . What Ms. Tuchman does superbly is to tell how it was. . . . No one has ever done this better.”—The New York Review of Books “A beautiful, extraordinary book . . . Tuchman at the top of her powers . . . She has done nothing finer.”—The Wall Street Journal “Wise, witty, and wonderful . . . a great book, in a great historical tradition.”—Commentary NOTE: This edition does not include color images.

Research shows that students learn best when they actively participate in their learning. In particular, hands-on activities provide the greatest opportunities for gaining understanding and promoting retention. Apart from simple manipulatives, the mathematics classroom offers few options for hands-on activities. However, the history of mathematics offers many ways to incorporate hands-on learning. By bringing this material culture of mathematics into the classroom, students can experience historical applications and uses of mathematics in a setting rich in discovery and intellectual interest. This volume is a compilation of articles from researchers and educators who use the history of mathematics to facilitate active

learning in the classroom. The contributions range from simple devices, such as the rectangular protractor, to elaborate models of descriptive geometry. Other chapters provide detailed descriptions on how to build and use historical models in the high school or collegiate classroom.

### **Engineering Drawing and Graphic Technology**

This book is Designed for the students of Engineering and Technology as well as specially for Mechanical Engineering Degree and Diploma students. The teaching of this course faces difficulty in explaining the various concept of machine drawing viz., orthographical projection, sectioning, complicated mechanical assembly drawing etc. Sometimes explanation requires some three dimensional and complicated drawing to be drawn on the black board which is quite impossible due to the time constraint of class. This book is an outcome of the strong need felt by students offering the course and the teaching need felt by us. The teacher can explain the related concepts, drawing methods and uses of various parts being drawn etc. in each practical class without bothering the black board. The subject matter has been compressed from the view point of Mechanical Engineering students. The book also contains Basic Drawing Softwares which describes about the basics of Auto-CAD, CATIA, PROE, ANSYS etc. which is useful for today's need

of Engineering & Technology.

### **Constructive Anatomy**

Original Boy Scout Handbook is the official handbook of the Boy Scouts of America. It is a descendant of Baden-Powell's original handbook, Scouting for Boys, which has been the basis for Scout handbooks in many countries, with some variations to the text of the book depending on each country's codes and customs. The original edition of the handbook was based on Baden-Powell's work. Ernest Thompson Seton combined his Woodcraft manual, the Birch Bark Rolls, with Baden-Powell's Scouting for Boys. Subsequent works were done by other authors. William "Green Bar Bill" Hillcourt wrote the 6th, 7th, and 9th editions. Frederick L. Hines wrote the 8th, and Robert Birkby the 10th, 11th and 12th editions. The first Official Handbook, subtitled A Handbook of Woodcraft, Scouting, and Life-craft was published from July 1910 until March 1911 and appeared in eight distinct variations. It was written by Ernest Seton and drew greatly on Baden-Powell's Scouting for Boys, it included information on the organization of Scouting, signs and signaling, and camping, as well as Scouting games and a description of several Scouting honours. Notably, this book did not place emphasis on first aid, knife and axe use, or map and compass work, as later editions would. Because this edition was intended solely as a temporary guide until an authoritative handbook could be made, it is now known as the 1910 Original Edition Handbook. presented here show the conceptions that have proved simplest and most effective in constructing the human figure. The eye in drawing must follow a line or a plane or a mass. In the process of drawing, this may become a moving line, or a moving plane, or a moving mass. The line, in actual construction, must come first; but as mental construction must precede physical, so the concept of mass must come first, that of plane second, that of line last. Masses of about the same size or proportion are conceived not as masses, but as one mass; those of different proportions, in respect to their movement, are conceived as wedging into each other, or as morticed or interlocking.

Brian Duffy, aging soldier of fortune, had been hired in Venice by a strange old man who called himself Aurelianus Ambrosius. He was supposed to go to Vienna and act as bouncer at an inn where the fabulous Herzwosten beer was brewed. That was clear enough. But why was he guided and guarded on the trip by creatures from the ancient legends? Why should he be attacked by ifrits and saved by mythical dwarfs? What was so important about the Herzwosten beer to the Fisher King -- whoever he was? Why was Duffy plagued by visions of a sword and an arm rising from a lake? And what had a bunch of drunken, ancient Vikings to do with it all? Then there was no time for speculation as Vienna was besieged by the Turkish armies of Suleiman. Duffy found himself drawn into a war of desperation

and magic. It was up to him to preserve the West until the drawing of the Dark.

Modeling, and Graphics for Engineering Design was written from the ground up to take a brand-new approach to graphic communication within the context of engineering design and creativity. With a blend of modern and traditional topics, this text recognizes how computer modeling techniques have changed the engineering design process. From this new perspective, the text is able to focus on the evolved design process, including the critical phases of creative thinking, product ideation, and advanced analysis techniques. Focusing on design and design communication rather than drafting techniques and standards, it goes beyond the what to explain the why of engineering graphics.
