Wiley Organic Structures From Spectra

Organic photovoltaics (OPVs) represent a promising solar energy harvesting technology offering numerous attractive attributes that include: light weight and mechanical flexibility with the potential for low manufacturing cost due to their broad compatibility with large-area processing techniques. ¹ In recent years, most efforts have been dedicated to the design of new materials with improved

17.1% Efficient Single-Junction Organic Solar Cells

Formic acid is the simplest carboxylic acid, containing a single carbon. Occurs naturally in various sources including the venom of bee and ant stings, and is a useful organic synthetic reagent.
